Elevating the Comfort at Austin Height Sports Arena's Badminton Zone

Nestled in the heart of Johor Bahru, Johor, Malaysia, the Austin Height Sports Arena stands as a prime example of a functional badminton hub with a unique design. While renowned for its remarkable features, the game-changer, realcolor® Primero, plays a pivotal role in elevating comfort levels within this sports zone.

Designed primarily as a badminton facility, the arena's roof system, featuring the Mist Grey shade, is integral to its functionality. Its unique design allows the roof to be installed at a low pitch without concerns of water retention, all thanks to the high rib and concealed roof profile of the OSM Hicondek® 40 Primero Roof System from Overseametal Sdn Bhd. This ensures that players and spectators can enjoy the game without the hassle of weather-related interruptions. Additionally, the Mist Grey roof, known for its ability to absorb less heat due to its lighter shade, plays a crucial role in creating a comfortable climate within the sports zone.

As the chosen metal for the wall cladding of OSM Metaldek® 26 Primero Wall Cladding, it offers not only an appealing visual aspect but also a practical one. It safeguards the structure against wear and tear over time. This added protection ensures that the sports zone maintains its comfortable environment, even in the face of frequent use. It does more than just contribute to aesthetics; it adds to the durability and longevity of the structure, providing a space where athletes can focus on their game without distraction.

The arena's innovation lies in its seamless integration of practicality and aesthetics. The selection of realcolor® Primero, the OSM Hicondek® 40 Primero Roof System, and OSM Metaldek® 26 Primero Wall Cladding creates a harmonious environment that leaves a lasting impression. This impression extends beyond its role as a sports facility, symbolizing innovation that combines aesthetic charm with functionality. realcolor® Primero, complemented by carefully chosen materials and colours, has become an integral part of the arena's identity. It creates a comfortable sports zone appreciated by both athletes and spectators alike.

In conclusion, it's not just about aesthetics; it's about practicality and durability, creating a space where athletes can perform at their best without compromising comfort. The arena is a true testament to how design and functionality can come together to provide a welcoming and comfortable sports environment.

REAL COLOR, REAL VALUE

Vibrant and cost-effective:
durable steel in captivating colors.
