

Every Masterpiece Needs a Strong Core: CSC Malaysia at Archidex 2025

CSC Malaysia proudly participated in the 24th edition of ARCHIDEX, Malaysia's leading architecture, interior design, and building exhibition, held from 23 to 26 July 2025. This year marked a significant milestone for the event as it was held across two major venues — Kuala Lumpur Convention Centre (KLCC) and MITEC — to accommodate the growing number of exhibitors and visitors, as well as to elevate the overall scale and impact of the show. This year, the event successfully occupied 10 exhibition halls comprising of more than 700 exhibitors in total and approximately 42,000 visitors.

Our booth remained at Hall 5 in KLCC, strategically positioned alongside other top-tier building material manufacturers. CSC Malaysia showcased its coated steel products through a booth design that incorporated real applications — including roofing, purlins, wall cladding, ceiling panels, and even recycled oil drums repurposed as coffee tables. The booth highlighted how our materials can be used not just as raw materials, but as integrated components in modern construction aesthetic.

This year, Astino showcased their impressive product lineup at a new, larger booth located across from ours within the same exhibition hall. Their booth prominently featured CSC Malaysia's logo and branding poster, reflecting the strong supplier relationship we've built over the years. This collaboration not only increased our joint visibility at ARCHIDEX 2025, but also reinforced the quality and trust placed in CSC Malaysia's coated steel solutions.

ARCHIDEX 2025 was yet another successful platform for CSC Malaysia to share our vision for sustainable steel solutions and to connect with the people shaping the future of the built environment. We thank all visitors who stopped by our booth and look forward to continuing the conversation throughout the year.
